Trimester 1	Trimester 2	Trimester 3
Structure & Properties of Matter	Matter and Energy in Organisms and Ecosystems	Space Systems: Stars and the Solar System
5-PS1-1 Develop a model to describe that matter is made of particles too small to be seen.	5-LS1-1 Support an argument that plants get the materials they need for growth chiefly from air and water.	5-PS2-1 Support an argument that the gravitational force exerted by Earth on objects is directed down.
5-PS1-2 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.	5-LS2-1 Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.	5-ESS1-1 Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from the Earth.
5-PS1-3 Make observations and measurements to identify materials based on their properties.	5-PS3-1 Use models to describe that energy in animals' food (used for body repair, growth, and motion and to maintain body warmth) was once energy from the sun.	5-ESS1-2 Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
5-PS1-4 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.	Earth's Systems	
Engineering Design	5-ESS2-1 Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.	
3-5-ETS1-3 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.	5-ESS2-2 Describe and graph the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.	
	5-ESS3-1 Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environment.	
	Engineering Design	
	3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.	
	3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.	
	3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.
